

EURUSD — regime frequency by year and timeframe

Generated (UTC): 2026-05-11 19:30:50 Symbol: **EURUSD**

Methodology (operational classifier)

This PDF counts how many **closed bars** fell into each *coded* regime, by **calendar year (UTC)** and by **candle timeframe**. Regime names are:

TREND_UP — bullish spread of EMAs vs ATR; **TREND_DOWN** — bearish spread; **RANGE** — neutral / tight spread per threshold rules.

Parameters: EMA fast=12, slow=26, ATR period=14 (SMA of true range), trend ATR mult= ± 0.35 , range ATR mult=0.15.

Note: The 52-label narrative taxonomy in **catalog/** is documentation-only unless you implement detectors for each label. This report reflects the Python/MT5 EMA–ATR regime engine only.
